Fishing and California's Marine Protected Areas

What are Marine Protected Areas?

Marine protected areas (MPAs) are special designated underwater areas, similar to the nation's parks, forests and wilderness areas on land, that prohibit or limit the take of marine resources.

Why does California need MPAs?

MPAs are recognized tools for protecting, enhancing and restoring marine life. MPAs foster healthy habitats and natural diversity, safeguarding the ocean's bounty for the economic and recreational opportunities of future generations.

How many MPAs are in California?

California was the first state in the nation to establish a statewide network of MPAs. There are now 124 MPAs from the border of Oregon down to the border of Mexico. The MPA network protects a variety of key habitats by linking MPAs along the coast.

Is Fishing Allowed in MPAs?

Fishing and the take of marine life such as shellfish or seaweed is not allowed in marine reserves and no-take marine conservation areas, which make up about half of California's marine protected areas. An inset map of local MPAs with their regulations is provided in this brochure.

Is Anchoring and Transit Allowed in MPAs?

Boats are allowed to anchor and transit through an MPA, however, fishing gear may not be deployed when in marine reserves or other MPAs that prohibit fishing for the species you have onboard. For additional information, scan the QR code on the right to visit the California Department of Fish and Wildlife's website.

Scan the QR code to the left with your smartphone or other internet enabled device to visit the California Department of Fish and Wildlife's MPA mobile website.

The website allows you to search for information about MPA boundaries and regulations. You can also use your GPS location to locate the closest MPA(s) and determine whether or not you are currently in an MPA.
